REFERENCE

- poetry_up.console
- poetry_up.git
- poetry_up.github
- poetry_up.poetry
- poetry_up.update

1.1 poetry_up.console

Command-line interface.

1.2 poetry_up.git

```
Git wrapper.
```

```
class poetry_up.git.MergeRequest (title: str, description: str)
```

Merge request with a title and a description.

```
poetry_up.git.add(paths)
```

Add the specified paths to the index.

Return type None

```
poetry_up.git.branch_exists(branch)
```

Return True if the branch exists.

Return type bool

```
poetry_up.git.commit (message)
```

Create a commit using the given message.

Return type None

```
poetry_up.git.current_branch()
```

Return the checked out branch.

Return type str

```
poetry_up.git.git(*args, check=True)
     Invoke git.
          Return type CompletedProcess
poetry_up.git.is_clean(paths=())
     Return True if the working tree, or the given files, are clean.
          Return type bool
poetry_up.git.push(remote, branch, merge_request=None)
     Push the branch to the remote.
          Parameters
                • remote (str) - The remote to push to.
                • branch (str) – The branch to be pushed.
                • merge_request (Optional[MergeRequest]) - The merge request to create for the
                 branch (optional).
          Return type None
poetry_up.git.remove_branch(branch)
     Remove the specified branch.
          Return type None
poetry_up.git.resolve_branch(branch)
     Return the SHA1 hash for the given branch.
          Return type str
poetry_up.git.switch(branch, create=False, location=None)
     Switch to the specified branch.
          Parameters
                • branch (str) – The branch to be switched to.
                • create (bool) - Create the branch.
                • location (Optional[str]) - The location at which the branch should be created.
          Return type None
1.3 poetry up.github
GitHub wrapper.
```

```
poetry_up.github.create_pull_request (title, body)
Create a pull request for the checked out branch.

Return type None

poetry_up.github.pull_request_exists (branch)
Return True if a pull request exists for the given branch.
```

Return type bool

1.4 poetry_up.poetry

```
Poetry wrapper.
```

```
class poetry_up.poetry.Package (name: str, old_version: str, new_version: str)

Package with current and available versions.
```

```
poetry_up.poetry.show_outdated()
```

Yield outdated packages.

Return type Iterator[Package]

Parameters

- package (Package) The package to be updated.
- lock (bool) If True, do not install the package into the environment.
- latest (bool) If True, update the version constraint when required.

Return type None

1.5 poetry_up.update

Update module.

```
class poetry_up.update.Action(updater)
```

Base class for actions.

property required

Return True if the action needs to run.

Return type bool

Actions for a package update.

classmethod create(updater)

Create the package update actions.

Return type Actions

```
class poetry_up.update.Commit(updater)
```

Create a Git commit for the update.

property required

Return True if the action needs to run.

Return type bool

Options for the update operation.

```
class poetry_up.update.PackageUpdater(package, options, original_branch)
     Update a package.
     property required
          Return True if the package needs to be updated.
             Return type bool
     run()
          Run the package update.
             Return type None
     show()
          Print information about the package update.
             Return type None
class poetry_up.update.PullRequest(updater)
     Open a pull request for the update branch.
     property required
         Return True if the action needs to run.
             Return type bool
class poetry_up.update.Push(updater)
     Push the update branch to the remote repository.
     property required
          Return True if the action needs to run.
             Return type bool
class poetry_up.update.Rollback(updater)
     Rollback an attempted package update.
     property required
          Return True if the action needs to run.
             Return type bool
class poetry_up.update.Switch(updater)
     Switch to the update branch.
     property required
         Return True if the action needs to run.
             Return type bool
class poetry_up.update.Update(updater)
     Update the package using Poetry.
class poetry_up.update.Updater(options)
     Update packages.
     run()
          Run the package updates.
             Return type None
```

CONTRIBUTOR GUIDE

Thank you for your interest in improving this project. This project is open-source under the MIT License and welcomes contributions in the form of bug reports, feature requests, and pull requests.

Here is a list of important resources for contributors:

- Source Code
- Documentation
- · Issue Tracker
- Code of Conduct

2.1 How to report a bug

Report bugs on the Issue Tracker.

When filing an issue, make sure to answer these questions:

- Which operating system and Python version are you using?
- Which version of this project are you using?
- What did you do?
- What did you expect to see?
- What did you see instead?

The best way to get your bug fixed is to provide a test case, and/or steps to reproduce the issue.

2.2 How to request a feature

Request features on the Issue Tracker.

2.3 How to set up your development environment

You need Python 3.6+ and the following tools:

- Poetry
- Nox

Install the package with development requirements:

```
$ poetry install
```

You can now run an interactive Python session, or the command-line interface:

```
$ poetry run python
$ poetry run poetry-up
```

2.4 How to test the project

Run the full test suite:

```
$ nox
```

List the available Nox sessions:

```
$ nox --list-sessions
```

You can also run a specific Nox session. For example, invoke the unit test suite like this:

```
$ nox --session=tests
```

Unit tests are located in the tests directory, and are written using the pytest testing framework.

2.5 How to submit changes

Open a pull request to submit changes to this project.

Your pull request needs to meet the following guidelines for acceptance:

- The Nox test suite must pass without errors and warnings.
- Include unit tests. This project maintains 100% code coverage.
- If your changes add functionality, update the documentation accordingly.

Feel free to submit early, though—we can always iterate on this.

You can ensure that your changes adhere to the code style by reformatting with Black:

```
$ nox --session=black
```

It is recommended to open an issue before starting work on anything. This will allow a chance to talk it over with the owners and validate your approach.

CONTRIBUTOR COVENANT CODE OF CONDUCT

3.1 Our Pledge

We as members, contributors, and leaders pledge to make participation in our community a harassment-free experience for everyone, regardless of age, body size, visible or invisible disability, ethnicity, sex characteristics, gender identity and expression, level of experience, education, socio-economic status, nationality, personal appearance, race, religion, or sexual identity and orientation.

We pledge to act and interact in ways that contribute to an open, welcoming, diverse, inclusive, and healthy community.

3.2 Our Standards

Examples of behavior that contributes to a positive environment for our community include:

- Demonstrating empathy and kindness toward other people
- Being respectful of differing opinions, viewpoints, and experiences
- Giving and gracefully accepting constructive feedback
- · Accepting responsibility and apologizing to those affected by our mistakes, and learning from the experience
- Focusing on what is best not just for us as individuals, but for the overall community

Examples of unacceptable behavior include:

- The use of sexualized language or imagery, and sexual attention or advances of any kind
- Trolling, insulting or derogatory comments, and personal or political attacks
- · Public or private harassment
- Publishing others' private information, such as a physical or email address, without their explicit permission
- Other conduct which could reasonably be considered inappropriate in a professional setting

3.3 Enforcement Responsibilities

Community leaders are responsible for clarifying and enforcing our standards of acceptable behavior and will take appropriate and fair corrective action in response to any behavior that they deem inappropriate, threatening, offensive, or harmful.

Community leaders have the right and responsibility to remove, edit, or reject comments, commits, code, wiki edits, issues, and other contributions that are not aligned to this Code of Conduct, and will communicate reasons for moderation decisions when appropriate.

3.4 Scope

This Code of Conduct applies within all community spaces, and also applies when an individual is officially representing the community in public spaces. Examples of representing our community include using an official e-mail address, posting via an official social media account, or acting as an appointed representative at an online or offline event.

3.5 Enforcement

Instances of abusive, harassing, or otherwise unacceptable behavior may be reported to the community leaders responsible for enforcement at mail@claudiojolowicz.com. All complaints will be reviewed and investigated promptly and fairly.

All community leaders are obligated to respect the privacy and security of the reporter of any incident.

3.6 Enforcement Guidelines

Community leaders will follow these Community Impact Guidelines in determining the consequences for any action they deem in violation of this Code of Conduct:

3.6.1 1. Correction

Community Impact: Use of inappropriate language or other behavior deemed unprofessional or unwelcome in the community.

Consequence: A private, written warning from community leaders, providing clarity around the nature of the violation and an explanation of why the behavior was inappropriate. A public apology may be requested.

3.6.2 2. Warning

Community Impact: A violation through a single incident or series of actions.

Consequence: A warning with consequences for continued behavior. No interaction with the people involved, including unsolicited interaction with those enforcing the Code of Conduct, for a specified period of time. This includes avoiding interactions in community spaces as well as external channels like social media. Violating these terms may lead to a temporary or permanent ban.

3.6.3 3. Temporary Ban

Community Impact: A serious violation of community standards, including sustained inappropriate behavior.

Consequence: A temporary ban from any sort of interaction or public communication with the community for a specified period of time. No public or private interaction with the people involved, including unsolicited interaction with those enforcing the Code of Conduct, is allowed during this period. Violating these terms may lead to a permanent ban.

3.6.4 4. Permanent Ban

Community Impact: Demonstrating a pattern of violation of community standards, including sustained inappropriate behavior, harassment of an individual, or aggression toward or disparagement of classes of individuals.

Consequence: A permanent ban from any sort of public interaction within the community.

3.7 Attribution

This Code of Conduct is adapted from the Contributor Covenant, version 2.0, available at https://www.contributor-covenant.org/version/2/0/code_of_conduct.html.

Community Impact Guidelines were inspired by Mozilla's code of conduct enforcement ladder.

For answers to common questions about this code of conduct, see the FAQ at https://www.contributor-covenant.org/faq. Translations are available at https://www.contributor-covenant.org/translations.

Command-line tool for upgrading Python dependencies using Poetry.

By default, this tool determines outdated dependencies using poetry show —outdated, and performs the following actions for every reported package:

- 1. Switch to a new branch poetry-up/<package>-<version>.
- 2. Update the dependency with poetry update. For incompatible updates, also update pyproject.toml.
- 3. Commit the changes to pyproject.toml and poetry.lock.
- 4. Push to origin (optional).
- 5. Open a pull request or merge request (optional).

If no packages are specified on the command-line, all outdated dependencies are upgraded.

12 Chapter 4. License

FIVE

INSTALLATION

To install poetry-up, run this command in your terminal:

\$ pip install poetry-up

SIX

USAGE

poetry-up's usage looks like:

```
$ poetry-up [<options>] [<packages>]
```

--install

Install dependency into virtual environment. This is the default behavior.

--no-install

Do not install dependency into virtual environment.

--commit

Commit the changes to Git. This is the default behavior.

--no-commit

Do not commit the changes to Git.

--push

Push the changes to the remote repository.

--no-push

Do not push the changes to the remote repository. This is the default behavior.

--merge-request

Open a merge request.

--no-merge-request

Do not open a merge request. This is the default behavior.

--pull-request

Open a pull request.

--no-pull-request

Do not open a pull request. This is the default behavior.

--upstream <branch>, -u <branch>

Specify the upstream branch. By default, branches are created off the master branch.

--remote <remote>, -r <remote>

Specify the remote to push to. By default, branches are pushed to origin.

-C <directory>, --cwd <directory>

Change to this directory before performing any actions.

-n, --dry-run

Just show what would be done.

--version

Display the version and exit.

--help

Display a short usage message and exit.
